Found out a really cool way to get cool music without p2p progs or HTTP/FTP sites. Best thing of all: NO  
QUEUES, NO PASSWORDS...

Here it is:

1. Get Yahoo Messenger [BETA] here:

CODE

<http://download.yahoo.com/dl/installs/msgr6suite.exe>

2. Wait for it to download, then run it and let it download another 5 MB or so.

3. Get FairStar MP3 Recorder here:

CODE

<http://www.shareordie.com/forum/index.php?showtopic=9754>

After testing Total Recorder and another prog, the FairStar product is the best RECORDING MP3s from a source, in  
our case the INTERNET RADIO.

4. Fire up LAUNCHcastRadion in Yahoo Messenger [BETA] and choose a station or a genre.

5. Start up FairStar MP3 Recorder, go to Record Options and CHECK autoseeting, go to Encoder-MP3 and UN-CHECK  
enable VBR and choose 128 or 192 KBs. Also make sure you choose your OUTPUT folder and you're done.

6. Hit record or whatever and awaaaaaay you go.

More soon...
