

Hello, i'm gonna post here 3 ways of bypass the StarForce CD Protection that comes with some games. The 2 first ways, were used to bypass the StarForce Protection of «Codename Panzers Phase», the last one, is the way of play «D-Day», but they might work with other games:

//////////\*1000+ HACKING TRICKS & TUTORIALS - ebook By Mukesh Bhardwaj Blogger - Paid Version - only @ TekGyd | itechacks | Mukeshtricks4u\*////////  
-----  
-----

First:

- 1) Do not put any cd...;
- 2) Run Daemon-Tools with RMPS on (don't know how necessary is this);
- 3) Run the game...it will say Error, No CD Found or something like this;
- 4) Turn off Daemon-Tools rpms...
- 5) Eject the CDrom/DVDrom and put it in...and when it's beginning to retract back the CD tray... i click retry immediately! Before it even goes in.

When doing this i get 100% success loading the game with the backup CD!...If i waited until the CD goes all the way in, it never worked for me.

=====

Second:

- 1) CD1 & CD2 has to be burned on a 700MB CD-R or CD-RW, burn CD3 on a 700MB CD-RW!!!
- 2) Select the following preferences with Alcohol 120% and then burn the CD:

Filetype:.....:Useradvanced (as the user want's it?)  
Burnmethod:.....AO/SAO  
Buffer Underrun Technology activate:..oh.gifN  
Don't Close The Last Session:.....:OFF  
Ignore EFM Error :.....:OFF  
Correct Sub-Channel :.....oh.gifN (default)  
"RMPS" write on disc (or write on medium I don't know):.....:OFF

- 3) Install the game and start it;
- 4) Reboot your pc that the Starforce 3 driver is going to activate itself;
- 5) Insert the disc 3 and play the game;

NOTE: Before the Start you aren't allowed to activate Emulations with alcohol or to run any kind of deamontool  
Don't Mount the Images! The game starts only if you have Disc 3 in your drive!

Addition:

Burn CD1, CD2, CD3 as it's described in the upper part, than remove alcohol 120.

Remove all CD's of your drives.  
Start Deamon-Tools and activate RMPS.

Start Panzers.

Than there is a ERROR: CD not found (or something like that)- but thats ok.

Now deactivate the RMPS in your DeamonTools but still run the program in the background . Deactivate only PMPS  
. Now insert CD3 to your drive an click on the button retry

Now the game starts.

=====

Third:

- 1) Install D-Day;
- 2) Shut Down PC;
- 3) Turn off the power from yor CD/DVD-Roms manually;
- 4) Turn on your PC;
- 5) Mount the D-Day CD1 with Deamon-Tools, use RMPS Emulation;
- 6) Play and have fun.
