When all malware has been removed, open My Computer and note the USB drive letter.

Open Notepad, then copy & paste these lines.

```
ATTRIB -S -H -R *.*
```

```
MD MOVEVBS
```

```
MOVE *.VBS MOVEVBS
```

```
DEL AUTORUN.INF
```

How to remove shortcut virus from your pen drive

```
MD AUTORUN.INF
```

```
ATTRIB +H +R AUTORUN.INF
```

Click File and Save As. Type "C:\MOVEVBS.BAT" (including the quotes) as the file name, then click Save.

Power down the computer. Power up and immediately begin tapping the F8 or F5 key to invoke the advanced options menu. Select "Safe Mode with Command Prompt".

Log on to any account with administrator's rights. When the command prompt opens, type the USB drive letter followed by a colon, then press Enter. To verify that you're on the correct drive, type

```
DIR /A /W
```

and press Enter to list the drive's contents.

If you're satisfied that you're looking at the right drive, type

```
C:\MOVEVBS.BAT
```

and press Enter.

Remove the flash drive. Insert another drive and perform the above command. Repeat for each flash drive.

When done, type SHUTDOWN -R -T 0 (the last character is a zero) and press Enter to restart.
