hack bank accounts by using zeus

Remote Administration Tool Zeus BotNet (RAT). We choose Zeus because Zeus was one of the famous trojan horse in history that is infecting many computers worldwide. If you don't know about Zeus, here is some definition from Wikipedia:

Zeus is a Trojan horse that steals banking information by Man-in-the-browser keystroke logging and Form Grabbing. Zeus is spread mainly through drive-by downloads and phishing schemes. First identified in July 2007 when it was used to steal information from the United States Department of Transportation, it became more widespread in March 2009. In June 2009, security company Prevx discovered that Zeus had compromised over 74,000 FTP accounts on websites of such companies as the Bank of America, NASA, Monster.com, ABC, Oracle, Play.com, Cisco, Amazon, and BusinessWeek.

Requirements:

1. Remote Administration Tool(RAT) Zeus BotNet (Download)
2. Web Server + Database Server (in this example we use XAMPP)

Remote Administration Tool(RAT) Zeus BotNet:

1. Firstly, we need to install the web server and database server. Since we're using XAMPP for this tutorial, you can refer to previous step by step How to Install XAMPP in 7 Simple Steps to install XAMPP on Windows machine and make sure your XAMPP apache and MySQL service was started and running.
2. Open the internet browser and type <http://localhost/phpmyadmin>. Input the username and password, by default the username is root and password leave it empty. After that create a new database, I named it bot, but you can change it into whatever you want. This database name will be used for the installation of remote administration tool.
3. The next step we need to download the remote administration tool file and extract it, you will find 3 main folder builder, other, and server[php]. Create a new folder inside C:\xampp\htdocs. I give the folder name as bot, then copy the server[php] contents into C:\xampp\htdocs\bot.
4. Now back again into our web browser and type <http://localhost/bot/install> into the address bar. Input all required field with the correct information

Information:

- The host address for MySQL filled with your database server IP address. If you run XAMPP it should be your IP address.
- Database is filled with information about our database name that already created in step 2.
- Encryption key you can filled with any characters with length from 1 – 255

click Install to start installing.

Notes: If you get this error

ERROR:Failed connect to MySQL server: Host 'myusername' is not allowed to connect to this MySQL server.

You need to do the following step by step

- a. Open your PHPMyAdmin <http://localhost/phpmyadmin> and click the Privileges tab. Click edit button to edit the root user privileges.
- b. In the edit user page, scroll down and find the login information section. Change the

Host from localhost to Any host and press Go button.

5. This is the information preview if zeus remote administration tool web server was successfully installed.

6. The next step is configuring and create the zeus bot client. Open the builder folder and open config.txt configuration file. Change the url_config, url_loader and url_server configuration according to your setting, you can see my setting in the picture below.

Note: don't forget to edit the path of webinjects.txt.

7. Now for the next step, open the zsb.exe file. In the picture below I've already create the step by step to build the bot executable. Just follow the step.

8. After all the build bot config and bot executable on step 7, now we have the new file config.bin and bot.exe. Copy those two file into the htdocs folder. Mine was inside C:\xampp\htdocs\bot.

9. Now let's says we will send the generated bot.exe to the victim. After victim execute the file we can check our attacker server. Open the browser and type <http://localhost/bot/cp.php> and insert your username and password.

10. We can see the new infected victim in the web interface and even view the desktop screenshot of the victim.

Conclusion:

1. When victim already infected, attacker can

gather many information from the victim including all internet activities and even gather all the website username and password since this tool can act as a keylogger and capturing the log in information.

2. To prevent the attack of this trojan, always update your operating system and anti virus and do not click any link that looks suspicious in your mail or chat messenger.

Phone Take Over, or How to BYPASS any VBV and MCS security

Phone Take Over, or How to BYPASS any VBV and MCS security

First of all, to make this tut and bypass the VBV security, you need to have the maximum on informations of the cardholder like phone number, SSN, DOB, complete adress... And a burner phone.

So you can't do it with a pub cc posted on the forum

You got the phone number of the cardholder and some info about him ? Nice. Let's fuck the VBV security.

Take the real phone number of the cardholder, and use WhitePages to find who is the phone provider. If you cannot find it, then you might want to use SpoofTel and call the various providers (AT&T, Verizon, Sprint, etc.) and use their automated system to try to find out if the number is registered with them. You can use phonevalidator.com to see if the phone is a cellphone or a landline.

When you have the background report of the victim, you can see that they often have many phone numbers. Use the service to find which one is landline and which one is cellphone. For cellphones, it's very easy to find the provider, as most of them allow you to call the phone and press * (star) to go in the voicemail settings, so you recognize the greeting. Use your logic, and write the phone numbers, probably like that:

Phone 1, landline, 555-123-4567, Verizon

Phone 2, cellphone, 666-234-5678, AT&T

Now, remember, you have the full address, DOB, SSN, and more information on the cardholder, and you know what is his phone company. What are we gonna do? That's right, Call Forwarding!

Call up the phone company with your burner phone. And do this :

Agent: Thank you for calling Verizon, my name is xyz, how can I help you?

Me: Hi! I will be away from my house in the next days but I'm waiting for an important call on my landline. Since I cannot reach the other party, I would like to set call forwarding so I will receive the call on my 2nd cellphone.

Agent: No problem, can I have your name?

Me: abc

Agent: Thank you abc what is your full address?

Me: 123 fake Street, Washington DC, 12345.

Agent: Thank you, and may I have your date of birth?

Me: October 1st, 1845.

Agent: Thank you. Did you know that you can press *72 on your phone to activate call

forwarding? This is an easy way to do it without calling customer service.

Me: Thanks for the tip, however I'm not home at the moment, so I am unable to do that.

Agent: Okay no problem, I will activate it for you. What is the phone number you would like the calls forwarded to?

Me: That's my other cellphone, 456-123-3245 (your burner phone)

Agent: All right, and you want it to start now?

Me: Yes, please.

Agent: No problem, I activated it for you. When you will be home, you can use *72 again to deactivate the forwarding.

Me: Thanks.

Agent: Is there anything else I can help you with?

Me: Nope, thanks. Bye !

Some phone companies, AT&T by experience, ask for a 4-digit PIN, but it can be easily bypassed using DOB and last 4 of SSN. If you are extremely unlucky and fail, you can start to say "i'm gonna go to another phone company, you are a shit company, it's very important, and by your fault i will not have that call"... That work sometimes.

When the Call Forwarding is activated, just card what u want, you will receive the VBV code on your burner phone..

Enjoy and leave a +rep plz guys

Carding online :: tutorial (how to stay safe while carding-shopping etc..)

Hello everyone*

How are you all doing? I'm doing good myself...

I am here to let you in on a few tips and tricks when it comes to carding online and

shops that you can easily card. Ultimately* every shop online is cardable* you just need the proper technique(s) and materials.

Moving forward* shops that I tend to target are the following:

www.Nike.com

www.Footlocker.com

www.Sportsauthority.com <--- very good for carding high-end bikes and selling them... even carded a \$2k treadmill!

www.thinkgeek.com

www.toysrus.com

www.ssense.com <--- for those of you who love high-end clothing

www.gamestop.com

These are just a few sites to name which I tend to target on a weekly basis...carding Sportsauthority is what I recommend as they ALWAYS ship and they ship extremely fast...tons of money to be made.

Personal tips:

- Always stay protected while carding* you can do this by making sure you have all of the following:
 - VPN (nVPN is decent)
 - Socks5 (matching the billing address on the card you're using)
 - Mac Changer (good to change your mac address; keep yourself totally anonymous)
 - Cracked/ open wifi spots around you location are a plus; use them if available!
 - Get in and get out; complete the task efficiently and effectively.
- When choosing which cards to you* I recommend you purchase either AMEX or DISCO; they are the strongest and will give you the best results.
- Always ask your vendor for the telephone number if it doesn't come with one...you'll need it when checking out.
- Do not check the cards yourself* you should trust that your vendor is selling you active/ live cards.
- BIN aka Bank Identification Number is important...stick to platinum cards and so fourth* stay away from gold/classic* they tend to only work for low amounts.
- When checking out* select the fastest shipping method. (the faster they need to ship* the less processing the order goes under)
- Placing orders at the right time is very effective...for example* around Christmas* security on websites isn't so strong...you get the point.
- Do not use your personal email* create an email over at www.mail.com and use that email.
- Match the email with the carder holder's name...so it looks even more legit.
- Quite a few shops require phone call verification; have a call service ready incase you must verify the order via the phone.

- As for selling your items* find a local connect like a pawn shop owner/ local shop owner who is willing to buy all of the items you get.
- Networking is key; this will get you good connects!

This is all you really need to begin carding* I hope you take my advice and make a nice amount of cash.

Thanks for your time

enjoy

ENOUGH FOR 2DAY

Xapo faucet instant WD to your Xapo Wallet

The best paying sites, right to your XAPO account:

1. {<http://riffhold.com/re0>} -300 satoshi cant get WD 30 minute 50 satoshi
2. {<http://riffhold.com/reW>} -5 minute 40-60 satoshi
3. {<http://atominik.com/1Qbc>} -10 minute 40-78 satoshi
4. {<http://atominik.com/1Qbv>} -5 minute 43-65 satoshi
5. {<http://riffhold.com/rf9>} -8 minute 40-60 satoshi
6. {<http://riffhold.com/rfC>} -8 minute 40-60

i will update soon !!!
