Rooting your android phone means of unlocking the operating system so you can install unapproved Google apps, update your OS, replace the firmware, overclock (or underclock) the processor, customize just about anything, and so on.

For the Limited user of the Android Phone, it must be too Scary process. After all, "rooting" around in your smartphone's core software might seem like a recipe for disaster. One wrong move and you could end up with bricked handset.

But, thankfully we have the great windows utility Kingo Android Root. Which Enables us to Root your android phones With just One-click.

Before we get starts you need to Download the Following Tool(s).

Kingo Android Root (http://download.cnet.com/Kingo-Android-Root/3000-2094_4-75996768.html)

So here your Step by Step Guides Starts :

=> Install Kingo Android Root.

=> Enable USB Debugging (Setting > About > Developer Options)

=> Run the Kingo Android Root and Connect you Phone to your Computer (via USB). After a moment, the former will show a connection to the latter.

=> Click Root and Wait for processing to be Finish.All the Process will all take about about two minutes, including the automated reboot at the end.

=> After Rooting your Android Phone, If you Don't like the Change you can go all the way back and Click Unroot form the Same place where you have Rooted your Phone.
