

Downloading Windows Media Streams

//////////*1000+ HACKING TRICKS & TUTORIALS - ebook By Mukesh Bhardwaj Blogger - Paid Version - only @
TekGyd | itechhacks | Mukeshtricks4u*////////

Look for the video source url in the webpage source code and copy it:

user posted image

To view the source code, r-click on the webpage that plays the video and select "view source." If unable to do so, just close the window and in the main Internet Explorer (IE) window, click the History icon or press Ctrl+H. Look for the same webpage on the left pane. On the menu, click View > View source.

Paste the video source url in Windows Media Player. (File > Open URL...)

Let the video play now. When the correct title appears on the playlist pane, r-click on it and select "Properties."

Select the source url and copy it:
