

Basic Spamming Tutorial

This stuff we need for do spamming.

1 :=> Cpanel

2 :=> Domain

3 :=> MAILER OR SMTP

4 :=> SCAM PAGE

5 :=> LEADS (email's)

Chapter 1

SETUP SCAM PAGE IN CPANNEL

1 :=> The most knobs ask me how Cpanel looks like n how I can upload scam page in Cpanel. So the ans in here look in fig 1.....

in Cpanel. So the ans in here look in fig 1.....

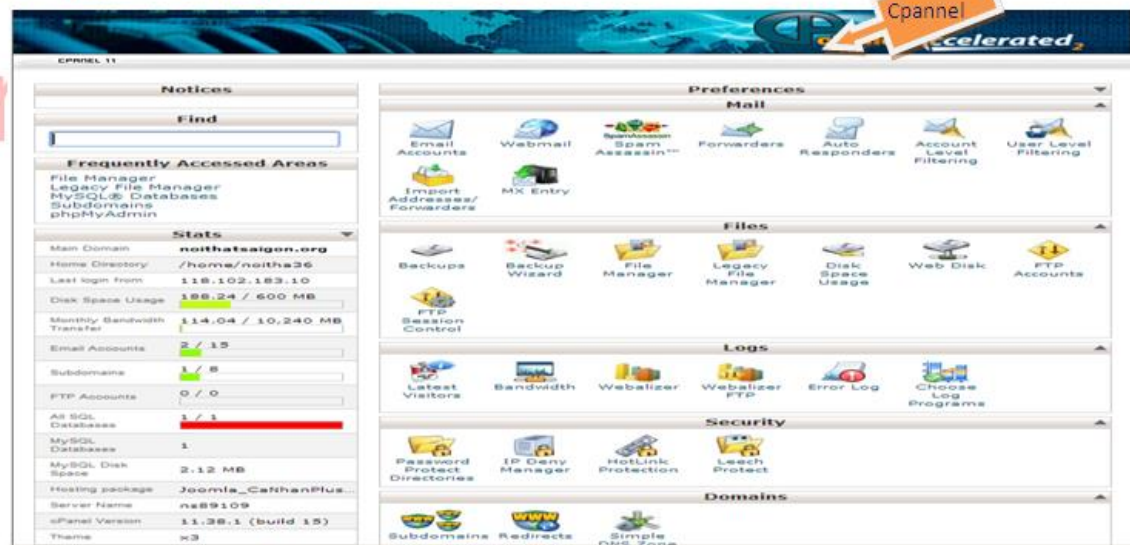

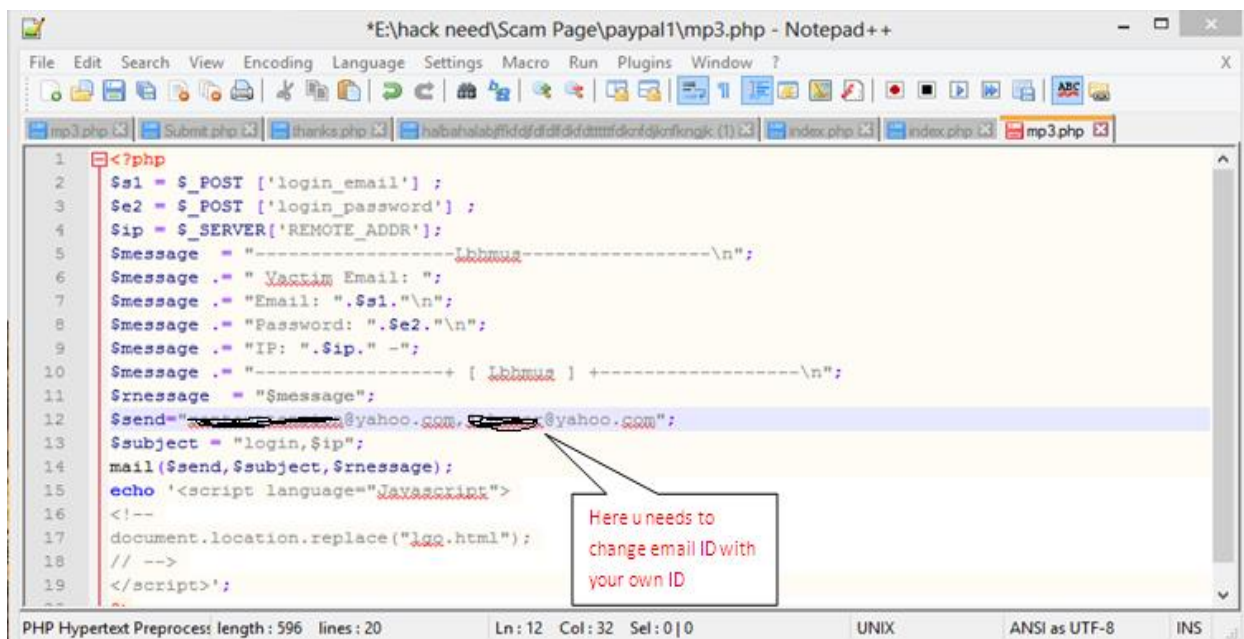

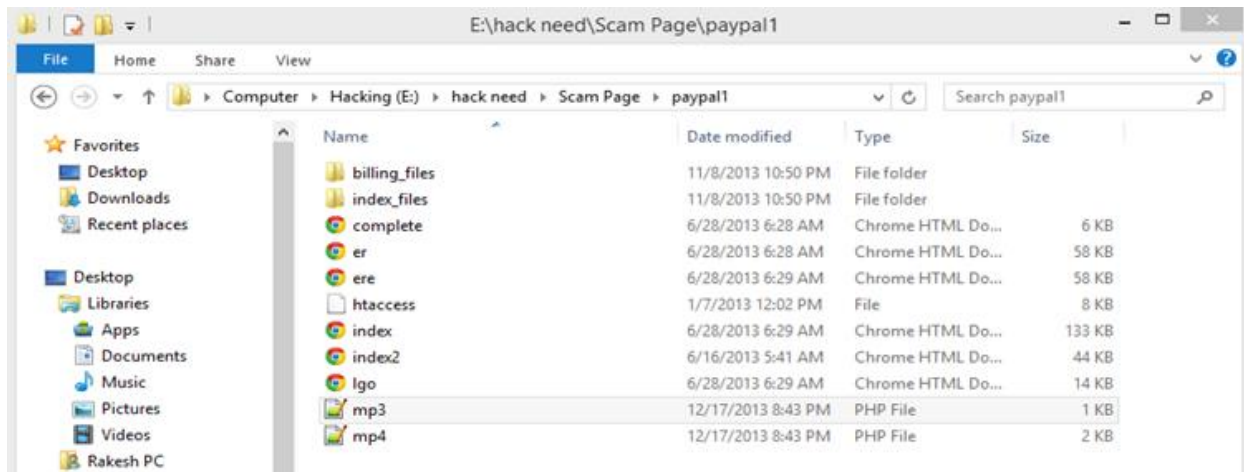

Figure 1

Here we can made a sub domain to upload our Scam page

Now you know how Cpanel look likes and now we need to change our result email in scam page and upload our scam page in Cpanel. Let's see how we can do this

Changing email :=> Unzip your scam page and find the PHP file where we can change our email result. Like this as shown in fig 2

First login into Cpanel and then click Sub domain option u can see in fig 1.
Than make a sub domain and click to document root to upload your scam
page and then upload it you can see in fig 3

The screenshot shows the cPanel Subdomains page. At the top, there's a header with 'cPanel Accelerated 2'. Below it, the 'Subdomains' section explains that subdomains are URLs for different sections of a website. A red box with an arrow points to the input field for creating a subdomain, with the text 'click here type name for subdomain'. Below this, the 'Create a Subdomain' form has a 'Subdomain' field and a 'Document Root' field. A red box with an arrow points to the 'Create' button, with the text 'click to creat'. Below the form, the 'Modify a Subdomain' section has a search bar and a table of existing subdomains. A red box with an arrow points to the 'Document Root' column of the table, with the text 'Click here to upload your scam page.'. A red box with an arrow points to the 'hereweputanyname...' subdomain entry, with the text 'This is our scam page link'. The table has columns for 'SUBDOMAINS', 'ROOT DOMAIN', 'DOCUMENT ROOT', 'REDIRECTION', and 'ACTIONS'. The first row is 'close.noithatsaigon.org' with document root '/public_html/clos'. The second row is 'hereweputanyname...' with document root '/public_html/hereweputanyname...'. The 'ACTIONS' column has 'Manage Redirection' and 'Remove' links for each row. At the bottom, there's a footer with links like 'Home', 'Trademarks', 'Help', 'Documentation', 'Contact', and 'Logout'.

Subdomains

Subdomains are URLs for different sections of your website. They use your main domain name and a prefix. For example, if your domain is noithatsaigon.org a sub-domain of your domain might be support.noithatsaigon.org.

Subdomains are relative to your account's home directory. The icon signifies your home directory which is /home/noitha36.

click here type name for subdomain

Create a Subdomain

Subdomain : . noithatsaigon.org

Document Root : /

Create click to creat

Modify a Subdomain

Search Go

SUBDOMAINS	ROOT DOMAIN	DOCUMENT ROOT	REDIRECTION	ACTIONS
close.noithatsaigon.org		/public_html/clos	not redirected	Manage Redirection Remove
hereweputanyname...	noithatsaigon.org	/public_html/hereweputanyname...	not redirected	Manage Redirection Remove

Home Trademarks Help Documentation Contact Logout

This is our scam page link

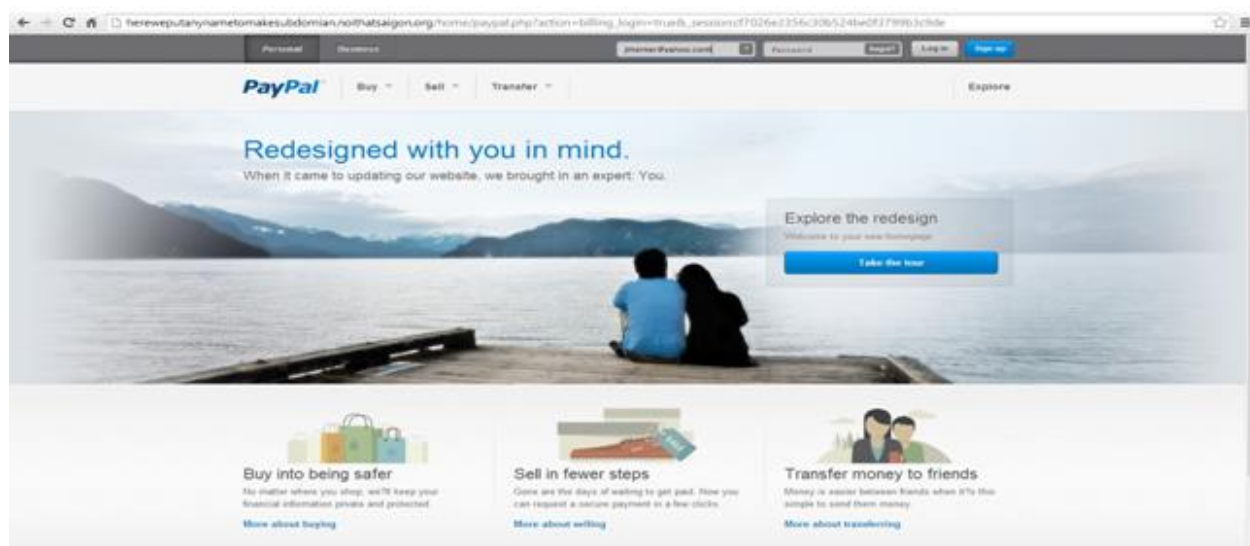

Click here to upload your scam page.

Figure 3

After click here one page will open like this here u can upload ur scam page zip file. As you can see in fig 4

Now we uploaded our scam page successfully. After uploaded scam page extract your zip file from extract option. Now we setup scamp page setup successfully here look likes.

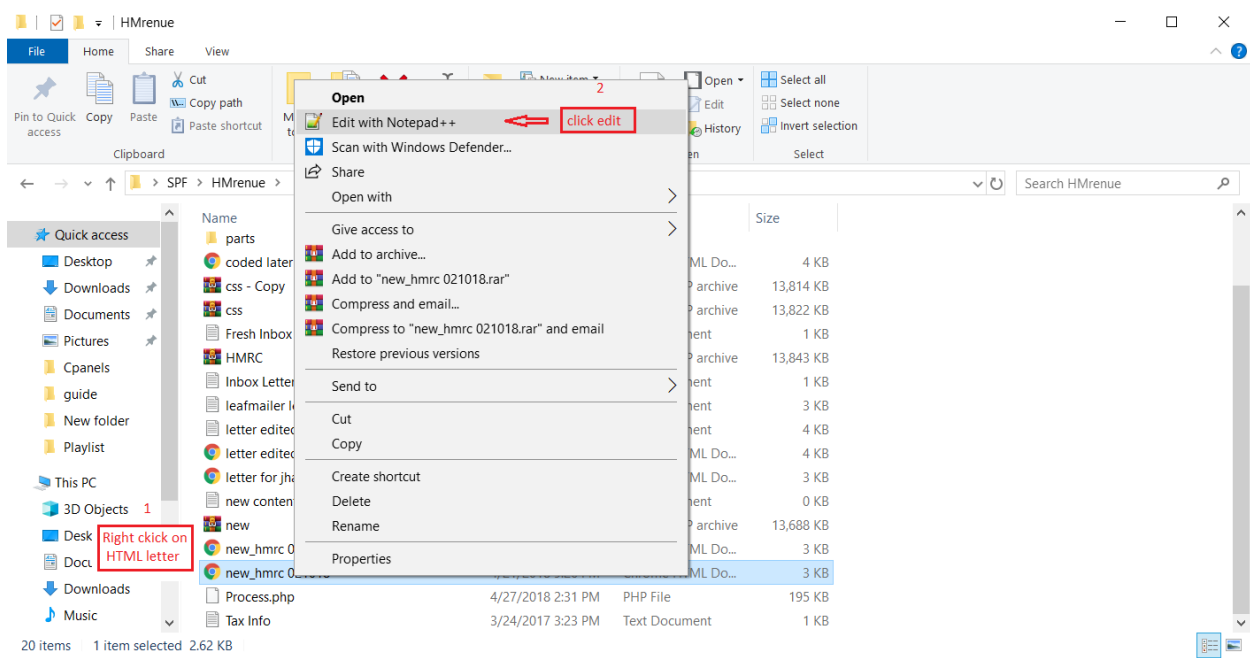

fill the page first to check the cpanel sending to you or not

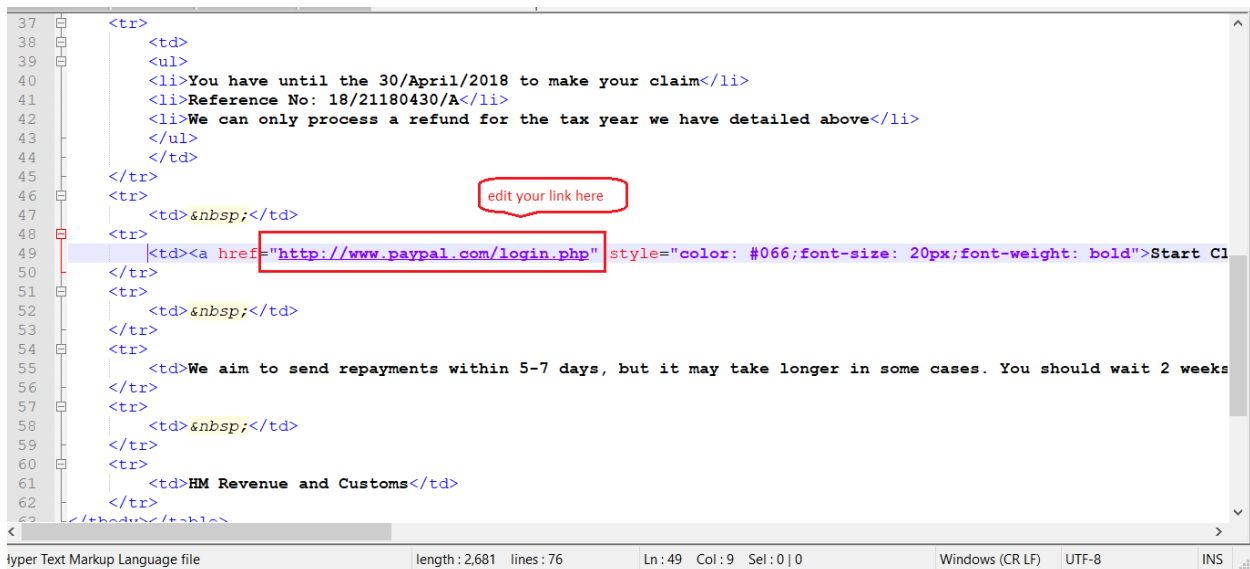

CHAPTER 2

MAIL SENDING WITH PHP INBOX MAILER

2 :=> Open your HTML letter n change the scam page link with your new scam page link. Like we change email address in scam page.

Now find and edit your new created link in letter

Remember edit your link between those 2 comma do not remove any of the comma then save

Now we need to send mail's to our victims

There is 2 ways to send email to the victims the first one is by PHP mailer and the second is SMTP

Guide for PHP mailer

You can buy PHP mailer from sellers or you can upload PHP script on cpanel just like scam page

This is link for PHP mailer script : <http://www.leafmailer.pw/>

if you have good cpanel download the script then upload it to your cpanel and enjoy☺

The screenshot shows the LeafMailer web interface. It includes fields for 'Email' (noreply@paypal.com), 'Sender Name' (Paypal), 'Attachment' (Choose Files), 'Subject' (your paypal account has been locked), 'Message Letter' (empty text area), and 'Email List' (a list of email addresses). There are also 'Message Type' (HTML/Plain) and 'Encode Type' (UTF-8 Encode) options. A 'SEND' button is at the bottom. Red annotations with numbers 1 through 6 point to specific fields: 1 points to the 'Email' field, 2 to the 'Sender Name' field, 3 to the 'Subject' field, 4 to the 'Message Letter' text area, 5 to the 'Email List' text area, and 6 to the 'SEND' button.

1 type your sender email

2 type your sender name

3 type your subject here

4 copy your paste edited letter content here

5 copy paste the email list of you victim here

6 then press send

1=> type in the sender email this email shows to your victim as reserved from

2=> type in the name of your sender just 1 word will be better

3=> chose your subject that matches you letter

4=> copy your letter contant the paste it here

5=> copy list of your victume email then paste it here 1 email each line always send first email to your self to test the mailer working or not

6=> then press send button and wait for all email to go

Guide for SMTP

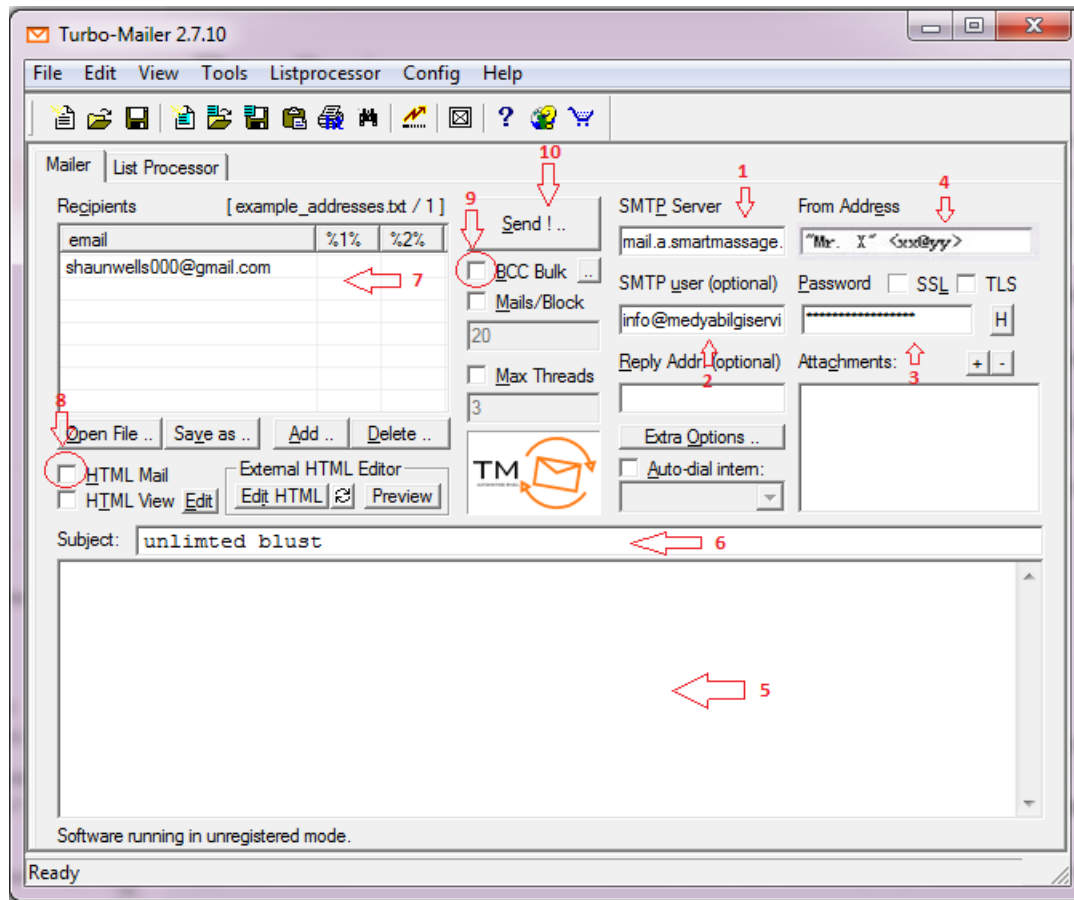

For smtp spamming you need (Turbo mailer software & SMTP)

First install turbo mailer software

This is the link for turbo mailer download and install :

<https://mega.nz/#!EfRAXyQC!rfwlxIxSdS82gFhGS3kP0TWRCdCJDyJdtCq1qnsV4MU>

Then run the software

1=> type in or copy paste your SMTP server

2=> type in or copy paste your SMTP user

3=> type in or copy paste your SMTP password

4=> type in your sender name and sender email this shows your victume the mail reserved from for example i spamming paypal so i use my sender name and email as paypal first you type name then email "Paypal" <noreply@paypal.com>

5=> copy paste your letter content here

6=> type in your subject

7=> copy and paste your victume email list here

8=> check the box 9=> check the box

10=> press send button to start sending emails to your victims

Always send first email to your self to test SMTP working or not

Chapter 3 :=> LEADS (email's)

Its imprtent to spam vvalid leads now we have to extract the vvalid email leads from our data for example if we have alots of email leads but we only need to spam hotmail.co.uk gmail.com etc..

So we use this website as extractor <http://eel.surf7.net.my/>

The screenshot shows the 'Email Extractor Lite 1.8.1' web interface. It has a dark blue header with the title and 'Copyright © Surf7.net'. The interface is divided into two main sections: 'Input Window' and 'Output Window'. The 'Input Window' contains a list of email addresses, some of which are highlighted with red dashed boxes. The 'Output Window' shows a list of extracted email addresses. Below these windows are instructions: 'Paste your input in above textarea' and 'Your output will be displayed in above textarea'. There are two red arrows pointing to these instructions, labeled '1' and '5' respectively. Below the instructions are buttons for 'Extract', 'Reset', and a link for 'Need help?'. To the right of these buttons is a text box showing 'No. of addresses detected: 2598'. Below this is the 'Output Option' section, which includes a 'Separator' dropdown set to 'New Line', a 'Sort Alphabetically' checkbox, and a 'To Lowercase?' checkbox. There is a red arrow pointing to the 'Separator' dropdown, labeled '4'. Below this is the 'Filter Option' section, which includes a 'Only' dropdown, a text box for 'extract address containing this string:' with the value '@hotmail.co.uk', and a 'Type of address to extract:' dropdown set to 'Email'. There is a red arrow pointing to the text box, labeled '3'. Below the 'Filter Option' section is a footer that says 'This amazing free tool is made possible by Surf7.net'.

Email Extractor Lite 1.8.1 Copyright © Surf7.net

Input Window

mpward1978@gmail.com
Shaenahendley2014@gmail.com
angieruthven@hotmail.co.uk
elaine.olver@ntlworld.com
pickers89.cp@gmail.com
Kevinlane45@gmail.com
Cocolowe84@gmail.com
edelelouis20@aol.com

Output Window

saffia_p93@hotmail.co.uk
thomas.jaques@hotmail.co.uk
x_what_victory@hotmail.co.uk
aidanagnew2000@hotmail.co.uk
jora127@hotmail.co.uk
dru1989@hotmail.co.uk
jamesa.page@hotmail.co.uk
connormoore22@hotmail.co.uk

Paste your input in above textarea 1

Your output will be displayed in above textarea 5

Extract **Reset** [Need help?](#)

No. of addresses detected: 2598

Output Option

4 Separator: New Line ▼ ☐ Sort Alphabetically ☒ To Lowercase?

Group: Addresses (groups will be seperated by new paragraph) 2

Filter Option

Only ▼ extract address containing this string: @hotmail.co.uk 3

Type of address to extract: Email ▼

This amazing free tool is made possible by Surf7.net

1=> copy paste list of your emails at Input Windows

2=> select New Line

3=> input the email domain you want to extract for expamle @hotmail.co.uk

4=> click etract wait for script to extract the data

5=> now copy your extracted email and spam you continue extract all other domains from data.
