

How to Shutdown a Computer Using Notepad

This article will show you how to shutdown your computer using a notepad, or we can consider it as a prank virus also so just follow these few simple steps to proceed:

Edit Steps

1

Open notepad in your computer. you can find it in programs > accessories > notepad.

2

Type the following code in the notepad- "shutdown -s -t 45".

3

Now save the file in .bat format.

4

Run the batch file so formed. you will see a new window which will shutdown the system in 45 seconds.

5

You can also rectify the shutdown process by running "shutdown -a".
