

How to shutdown your friend's Pc  
through chat using CMD

??You can shutdown your friend's computer through  
chatting. This is very simple and  
cool trick.

??Step 1:

Before going to start clear all history, all cookies, stop all  
downloading and close all extra  
tabs. Mean to say stop all internet activities. Now go to your messenger and start chatting with the victim.

??Step 2:

Go the start and click on run.

??Step 3:

In run command type cmd.exe and hit enter.

??Step 4:

A black screen will appear.

This is command prompt. In this  
box type "netstat -n" (without  
quotes).

??Step 5:

Now if you done the step  
one correctly you see only one ip  
address many times (ip should be  
of victim).

??Step 6:

Now again, type

"shutdown -i"(without quotes).A

box will appear now click on add  
button.A small box will pop up.

Now type ip address of computer  
which you get from "netstat -n"  
command.

Step 7:

Now there are three  
options click on shutdown.

??Step 8:

To show a message to  
victim's computer check the  
"warm users of the action" and  
set the number of seconds.

??Step 9:

Now select any option in  
shutdown event tracker

??Step 10:

Now comes the best part of the  
prank. In last type your message  
like you got hacked and we  
destroy your computer. After this  
shutdown your computer is not  
going to start(type anything that  
scare your victim). Now click on  
ok and you are done.
