

Using Rapid Share, How to use them and skip the BS

After you put up your download - or someone else along

go to the download page, click Free - on this next page where the timer comes one - view source

Go down the view source to the end - grab the gobbly gook looking text (I cant get to it right now cause I am locked out for an hour otherwise I would show an example - its obvious - near the bottom)

go to

CODE

<http://sportsforum.ws/encode>

paste it on the third line down (bottom line)

hit submit - second line down will now have an actual link

```
<p><hr><p>You have requested the file <b>phpscripts_01.rar</b> (18627251 Bytes). This file has been downloaded

You want just that part

It's quite simple, when you want to download something that's on rapidshare, do the following:

1. go to the rapidshare link and click 'free' (so not the premium thing)
2. on this page, there's a counter that counts down from a specific amount of time before it displays the download link, view the source of this page
3. at the end of the source, there's a line with lots of numbers and % symbols, copy this line
4. go to sportsforum.ws/encode and paste the line you copied, onto the line
5. click encode now
6. direct link is shown
