In this tutorial I am going to show you how to hack facebook account using backtrack 5. So just follow the simple steps. First you must know what is backtrack?

Open your backtrack 5's terminal and type `cd /pentest/exploits/set`

Only Local Area!

Now Open social Engineering Tool kit (SET) `./set`

Just hit ENTER and SET will Open , Now just select 1st option (1 Social-Engineering Attacks) and hit enter after that 2nd number (just type 2 as shown in snapshot)

Now Just select 4th Option "Tabnabbing Attack Method" and Hit ENTER

Then select 2nd option "Site Cloner" and Hit ENTER

Now here you need to add the URL of Facebook (if you want to hack gmail then just add the gmail's URL)

Now just hit the enter.

Open new terminal and just type `ifconfig` and hit ENTER

Now just copy this IP address and open it in Browser.

Now here I am just typing test email and password to see whether it works or not.

Now just hit enter and switch back to our terminal and we found the Email and password !

Now give the ip address to victim and tell him to login and then his email and password will be in your hand.

Congratulations you have learnt Hacking.
