

You may find this helpful if you donwload hundreds of short episodes in rm format like me and tired of double-click to open next files.

//////////*1000+ HACKING TRICKS & TUTORIALS - ebook By Mukesh Bhardwaj Blogger - Paid Version - only @ TekGyd | itechhacks | Mukeshtricks4u*////////

Very easy. Use notepad to open a new file, type this inside:

file://link to file1

file://link to file2

(type as many as you want)

Close file. Rename it to FileName.rm

Then you`re done!!!!

Ex:

I put my playlist file here: C:\Movies\7VNR

And the movie files are in C:\Movies\7VNR\DragonBall

Then inside my playlist file I`ll have something like this:

file://DragonBall/db134.rm

file://DragonBall/db135.rm

file://DragonBall/db136.rm

file://DragonBall/db137.rm

file://DragonBall/db138.rm
