

download Desired Torrent file with IDM

1. First of all , you have to download the torrent file(.torrent) which you want to download...!
2. Then just go to the website <http://www.torcache.net/> OR GO TO [www.zbigz.com](http://www.zbigz.com) and upload the torrent file that you have just downloaded and click on the cache! button...,,!
3. This will give you a new torrent file . You just have to copy the link of the new torrent file from the opened window...,,!
4. Then go to the website <http://www.torrific.com/> and create an account there(in case you don't have) and login to your account. Then paste the address of the new torrent obtained in step 3 and click on Get button...,,!
5. Now you will get the list of available files present in that torrent file. Then click on the initiate bittorrent transmission button. This will give the full option to download the file. Just click on any link and you can see the download manager-IDM popping out for downloading the file...,,!
