

Unlimited \$2

The fastest, most reliable and guaranteed to work method

This E-book is an update for a previous one I wrote about getting unlimited \$2. The first version of this method sold a whooping 215 copies. Lucky for you, I have found a much faster way to achieve the goal with 200% less work. It will literally take you five minutes to earn \$2. This method has the capability of generating 25\$ an hour as an average approximation. The more you give it time, the more cash you have in your bank account.

As stated in the previous e-book, I would like to repeat that this method of earning an unlimited stream of \$2 was found by me, and I take full responsibility of its functionality and consequences. As long as you do it right, you'll face no trouble what so ever doing this trick.

Method of earning: Online Poker

Skill level: You do not even have to know how to play the game, but frankly if you do know the good news is that you can make up to \$8 at a time instead of only \$2.

Method explained:

Online poker is a very competitive domain on the internet where online casinos give you so much just to sign up at their tables. One of those online poker websites which is very much respected and known is 888poker. 888poker is willing to give you a free \$8 for signing up, but the \$8 is split between \$2 in cash and the other \$6 are entries to tournaments. So there you go your first 2\$!! But how the hell will this get you an unlimited stream of \$2 ?? Don't be a fool and try to uninstall it and reinstall it hoping to get another \$2, but the answer is between your hand. The loop hole is in their website; what you have to do is sign-up right from the website without downloading the game by pressing on "instant play". I will be providing screenshots after the explanation to clear any confusion. I recommend using Internet Explorer to do this method since it is the browser with the highest percentage of success doing this trick. After you have registered your account for the first time and got the \$2, close the browser, open it again and delete all browsing history including cookies and everything that comes along. Then enter the 888poker website again, and register a second time with a different e-mail address and get another \$2 for free. This way you will be able to create unlimited amounts of accounts with \$2 in them and all what you have to do is lose the \$2 from one account to the other. So your bank roll in your first account will start increasing \$2 after \$2 until you reach the minimum amount of withdrawal using your preferred method (Paypal, wire transfer, check etc..). Easy right? Now let's get to the screenshot explanations.

1- Go to <http://www.888poker.com/>

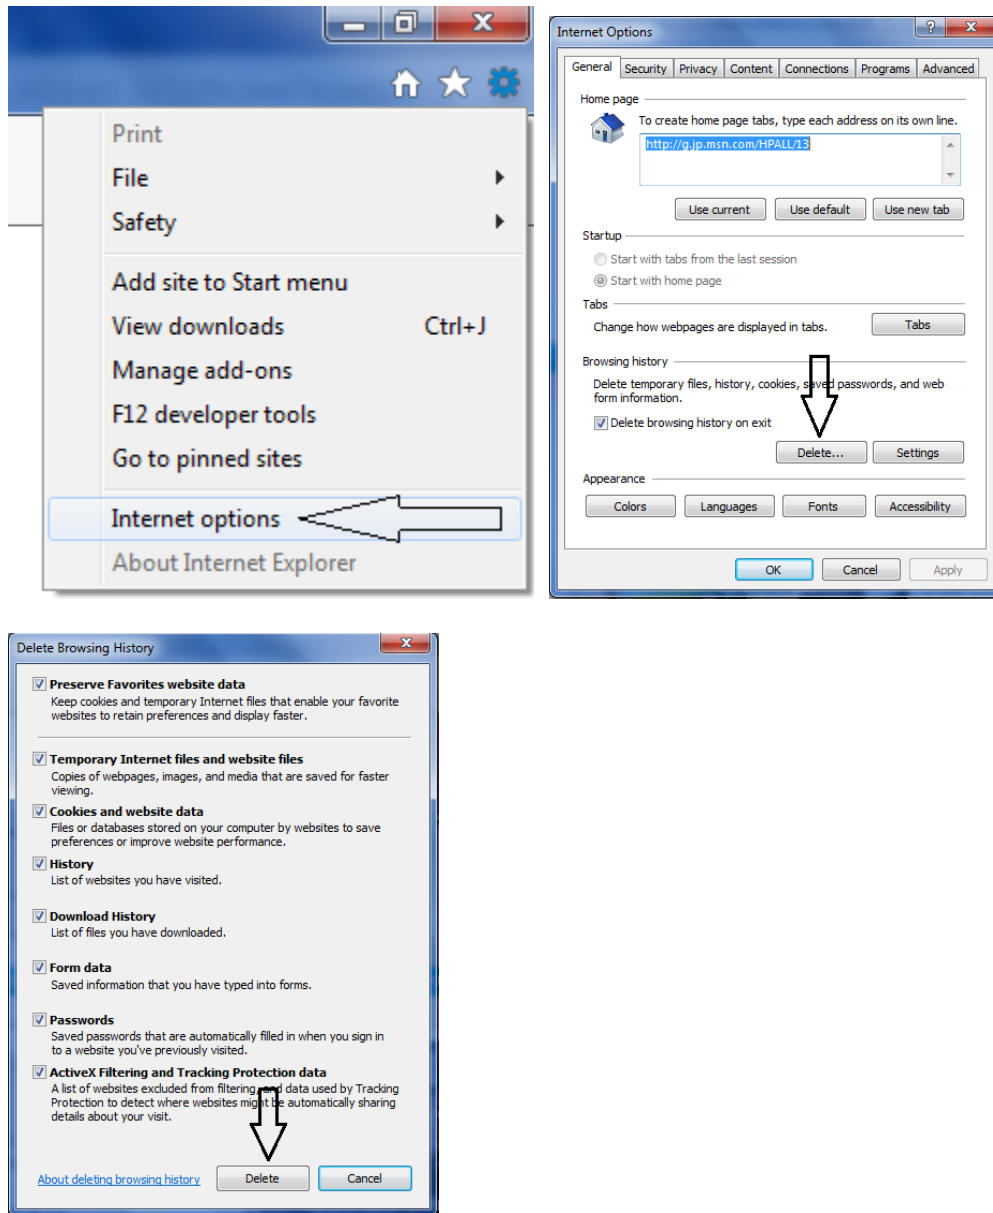

2- Click on Instant Play right under the big yellow "DOWNLOAD NOW" button.

3- Fill out random information but use a real e-mail you can access since you will use it to claim from it your \$8 bonus.

The image shows the registration form on 888poker.com. The header says '888 poker' and 'Already a member? | Help'. The main heading is 'Fill in your details below & check your EMAIL INBOX to get \$8 FREE'. There are three tabs: 'Your Info', 'Your Account', and 'Your Contact'. The 'Your Info' tab is selected. The form fields are: 'First name' (text input), 'Last name' (text input), 'Country' (dropdown menu), 'Email address' (text input with a blue question mark icon and a note 'Enter a valid email address to claim your \$8'), and 'Date of birth' (three dropdown menus for 'dd', 'mm', and 'year'). At the bottom, there is a checkbox with the text 'I'm over 18 years of age and I accept these Terms & Conditions and Privacy Policy'. The form concludes with 'Cancel' and 'Continue' buttons.

4- Go to your email and claim the \$8 bonus

How to clear your browsing history in case you do not know how:

I hope you face no problems applying the method. If you follow my steps I guarantee success and an infinite bank roll hopefully. In case your country does not support ATM a free cash bonus the solution is simple, just go to google and type in FREE VPN and download any of those free VPNs, I suggest to go for "hotspotshield" since it has worked flawlessly for me :-)

All you need is a keyboard, and internet connection, patience and your brain.

Good Luck :-)

El Beik
