Method 1(Steam)

Now this method is a manual way to spread but is VERY effective if executed properly. You will need a steam account that you have used to purchase something on, just create a new account and buy the cheapest game you can, probably <\$1. You will have to make a steam concept, go to: <http://steamcommunity.com/greenlight/> to get started.

Click on the 'Submit your Product' button above.

Now on the next page click the 'submit concept' button.

You will now need to create a title, branding image, description and category choice. This is time for you to get creative! Make up a name and make a description like:

"Mirrored is a story-driven puzzle adventure game. Cinematic cut-scenes direct the story as you unravel the enigma of the green mask. Where is your brother? What happened to Dr. Richard Hudson? And who are these unmarked agents trying to find you? Investigate Nick's office and solve clues to get through the first part of this thriller mystery."

The gameplay in Mirrored is simple and loyal to the basics of Old-School Adventure games. Players will examine the room from a static point of view and interact with detailed clues - puzzles by clicking dozens of objects inside the room.

A gripping suspense story for thriller lovers with motion comics cutscenes."

Just make anything up you can think of! You can go to the free Graphic request section and ask for a banner for your fake game.

Select all the relevant categories your game falls under and select all languages as it will open up the amount of people you are spreading to!

Accept all the terms and conditions and then click 'Save and continue'.

Now once it has been submitted, head over to the concept page (the page at which your fake game is located). Click on the 'announcements' tab and then 'Post new announcements'.

Now for the title put "Download our Demo!" or something similar. Next, put in the body of the announcement "Please try out our game Demo at: www.yourviruslinkhere.com" with the link to your file you are wanting to spread. And then something like "Feel free to leave feedback for the game!" and then click 'post'.

Now get 4-5 people from HF or friends to rate, favourite and follow your new 'game'. You only need a few likes for your concept to be ranked highly!

Bish bash bosh, now just sit back and watch the users pour into your RAT client or whatever you are spreading.

NOTES:

Make sure your file is at least mostly FUD if not FULLY FUD.

Method 2 (Answers.com/yahoo answers)

This method requires you to be persistent and to post your link as many times as possible. Navigate to the Software section of Yahoo.answers.com which is:

<https://answers.yahoo.com/dir/index?sid=396545664>

Then select a question that potentially could allow you to post your link, as shown below:

[Computers & Internet](#) > [Software](#) Next >

How do you convert .avi files to .mp4?

I am recording gameplay with Dxtory and would like to put the files into Sony Vegas but I either need to download the correct codecs or convert the files. I have tried download the correct codecs with no success (I must've done something wrong) but now I figured I would try converting the files. Do you know of... [show more](#)

This is good because you can say "This new software I'm using is really quick and efficient: www.evillinkhere.com".

This method is quick, easy and great because you are not only targeting people who ask the question but anyone who does a google search of it could find your answer and download your file!

I suggest shortening your direct download link with any popular URL shortener, this will give the link more trust!

THAT'S IT, MANY THANKS FOR PURCHASING GUYS!
