

itcoin Wealth

Introduction

Hello future multi-Bitcoiner. Today I will be introducing you to a method that will turn your empty Bitcoin Wallet into tens of Bitcoins. I have personally made 35 Bitcoin off of this method starting from nothing, and it's a surefire way to safely increase your Bitcoin wealth. Now before making any conclusions, note that the odds will always be in your favor, making it mathematically certain that you will profit.

Well, where will I be playing Bitcoin Poker?

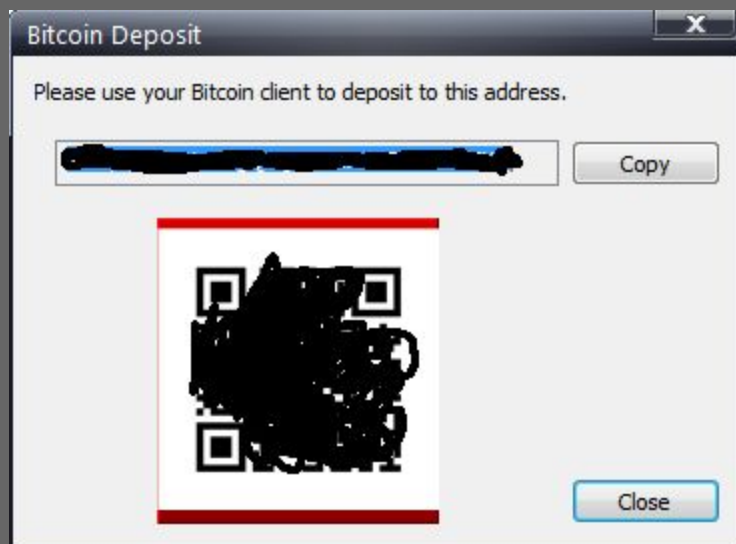

The website we will be playing on is Seals With Clubs. Seals with Clubs has been around since the emergence of Bitcoin in 2009, and is the perfect venue to grow our wealth. Begin by clicking on the banner above, and downloading the client by clicking PC-Client. Once you've downloaded the client, proceed by creating an account. Note that each chip on the website constitutes 0.001 BTC

Contrary to popular belief, poker is not all luck, and actually requires a lot of skill. Most players on Seals With Clubs play poorly, and are easy to make major money off of.

Initial Deposit (Optional)

This method will allow you to build your bankroll quickly, but I would recommend depositing at least .02 BTC (20 chips). Begin by clicking the Cashier button in the client, and sending the Bitcoin to the address shown. Remember that this is completely optional and use common sense, you don't want to deposit too much. This method will still work fine even if you decide not to deposit anything.

Freerolling to 20 Chips (No need if you initially deposited)

Seals with Club offers various tournaments offered every 1 hour 30 minutes, known as freerolls. These are free to enter tournaments where the top 10 entrants get paid. These tournaments are good practice, and I would recommend playing these until you have 20 chips.

RING GAMES		TOURNAMENTS		SIT & GOS		ACTIVE (7)	
ALL	REGULAR		FREEROLL	SATELLITE		PRIVATE	
Id	Date ▲	Game	Buy-in	Name		State	Enrolled

37125	25 Dec 08:40	NL Holdem	0	5 Chip NL Turbo Freeroll		Anno...	

Which tournaments/cash games should I play?

Remember that in poker there is an element of luck, so to combat this we will be using a Bankroll Management Strategy. Our strategy is simple: never play a tournament or sit in a cash game that requires more than 1/10 of the amount of chips you have. Therefore, with 20 chips, you should be playing the 2 chip cash game, as well as the 1 Chip Fast and 2 Chip Deep tournaments.

As you increase your bankroll, you should move to the 4 chip and 10 chip cash games. Likewise you should attempt the 5 chip deep. These tournaments give you a better chance to quickly build your bankroll, but are more risky, and thus we recommend avoiding them until you build up a larger bankroll.

Cash Game Strategy

The cash game strategy we will employ is quite simple, simply wait for 1 of these 4 hands: QQ, KK, AA, AK. Once you receive one of these hands, raise 5x the big blind, and if someone calls move all in on the flop unless:

- You have QQ and the flop has an A or a K
- You have KK and the flop has an A

- You have AK and the flop does not have an A or K

Most of the time people will call with worse hands, making you a tremendous favorite to win the all in and double up. Thus on average, you will make 1.8x your all in, making this quite profitable.

Tournament Strategy

The tournament game strategy we will employ is quite similar. Whenever we get AA, KK, QQ, JJ, or AK we will move all in. Once the tournament progresses to where you have only 10 Big Blinds, you will need to all in hands like:

- Any hand that includes an ace
- Any pocket pair (2 of a kind in hand)
- KJ and KQ

With this strategy you should find yourself entering the money the majority of the time, and therefore profiting on your initial buy in.

Cashing Out

To cash out, simply click on the cashier button followed by clicking on the withdraw button. Enter how many chips you would like to cash out, as well as your Bitcoin address and password. It's that easy, and cashouts take on average just a few hours, giving you quick access to your money.

A screenshot of a 'Withdraw Bitcoin' dialog box. The title bar says 'Withdraw Bitcoin' with a close button. The main text says 'Please enter the amount of chips to withdraw.' Below this, it shows 'Available' as '5,477.52 (5.47752 BTC)'. There is a text input field for 'Amount:' containing '0.0' and a label 'Chips' to its right. Below the input field is a 'Withdraw All' button. Further down are two more text input fields labeled 'Bitcoin Address:' and 'Password:'. At the bottom, it states 'The minimum withdrawal amount is 20 Chips (0.02 BTC)'. There are 'OK' and 'Cancel' buttons at the bottom right.

Withdraw Bitcoin

Please enter the amount of chips to withdraw.

Available 5,477.52 (5.47752 BTC)

Amount: 0.0 Chips

Withdraw All

Bitcoin Address:

Password:

The minimum withdrawal amount is 20 Chips (0.02 BTC)

OK Cancel

Misc

Don't risk a majority of your bankroll at any given time. Sometimes you run bad, don't give up, and keep up with the strategy. You'll make great profit in the long run. Don't play tables where no one calls your all ins. Have fun and make bank!

Extra (Bitcoin)

You may sometimes want more action, in which case an alternative site exists, known as Bitcoin. You can sign up by clicking the banner above.

Bitcoin offers similar cash games as Seals With Clubs and is a great alternative to Seals. Also note that Bitcoin does have a Web Client which you can play on, allowing you to play on the go, or even from your phone!

Aside from that, all the strategies remain the same at Bitcoin! Have fun and make bank!

Advanced Strategy and Additional Resources

The strategy mentioned above is a solid strategy, and will work very well, especially at lower stakes.

However, as you get more comfortable, you can expand your strategy to begin playing hands outside the regular range. Hands which are generally good are suited and connected hands, and bigger hands like KT+ and A8+.

In addition, rather than going all in, you can start making smaller raises to get people hooked into the hand, although this will force you to learn how to make big laydowns.

Here are some various resources for people of all levels:
