Newton 's laws of software. ..

Law 1: Every Software Engineer
continues his state of chatting or
forwarding mails unless he is
assigned work by manager.

Law 2: The rate of change in the
software is directly proportional
to the payment received from
client and takes place at the quick
rate as when deadline force is
applied.

Law 3: For every Use Case
Manifestation there is an equal
but opposite Software
Implementation.

Law 4 : Bugs can neither be
created nor be removed from
software by a developer. It can
only be converted from one form
to another. The total number of
bugs in the software always
remains constant...!
