

BLACKHAT BANKER

By ScorpiOn UID - 2543360

Thank you for purchasing "Blackhat Banker", an eBook exclusive to Hackforums. I provide full support to any questions you may have regarding this method, simple add me on skype @ johnrobb123. If you are not satisfied with this method kindly let me know and I will be more than happy to refund you. Any sharing, selling, or leaking of this method will result in loss of support, refund option, and a community alert. I take no responsibility with how you use this method, this is for educational purposes only!

STEP 1: Sign up [HERE](#). Info can be fake, but the email needs to be real (I recommend creating an email just for this). Enter in your email in the "join" textbox and hit the red button below it. Continue from there by filling in all of the information required. Then you will select a store you will pretend to work at. When finished with all those steps you should go confirm your email.

STEP 2: After signing up, confirming your email, and logging in, go [HERE](#). Look for the title that says "Invite by Posting a Link".

STEP 3: Under that, you should see your referral link. It should look something like: <http://www.3point5.com/invite/xxxxxx>. Copy this link.

STEP 4: Now go to Hotmail. Sign out if you're already signed in. Sign up for a new account. Make the email fake, but seem real. Like johnsmith76@outlook.com. After that, go [HERE](#). Add in as many email aliases as you can. Again, make them real. Examples are:

jackiejohnson72@outlook.com

lizzy.e8482@outlook.com

Make a total of 10 emails, then go back to your inbox.

STEP 5: Open a new incognito window, or open Tor. In the URL box, paste your 3point5.com invite referral link. On the left hand side, enter in the first email alias you registered. Click sign up and finish the sign up. Then, verify the email. It is EXTREMELY important that you verify the email for each of the accounts you create. The verification email should go to your hotmail inbox that you created earlier.

STEP 6: After signing up, and verifying the email, log out and do it all again, except next time using the next name on your alias list on hotmail. Do this 10 times all under that same original referral link.

Go back to your very first 3point5.com account. On this page [HERE](#) click the "Sent Invitations" tab. You should see 10 different emails. If you don't, you did something wrong and you should contact me.

STEP 7: Now wait. For each 10 referrals you make you get \$150 in Visa cards. They are emailed to the email that you registered your first 3point5.com account under. This may take up to a month to receive them, but usually sooner. Be patient, and in the meantime, make new accounts and get more referrals. But remember, only get 10 referrals per each main account. After that, make a new primary 3point5 account, get 10 referrals on that, repeat!

Cashing out these Visas can be a little tricky. If you don't want to spend them, try this:

- Make a new PayPal, add the card in, and then send the money normally to your main PayPal. Make a new PayPal for each card.
 - Buy Amazon cards for 1:1 on gyft.com. Then sell these codes at 80% value for BTC, or 85% for PayPal.
 - Sell the cards straight out for Bitcoin/PayPal
 - Be creative!
-

How I personally earned over \$6k, is not by myself doing the work. I found a smaller child, who wanted to make money. I offered him \$2 for each referral/account he made. That adds up to \$20 for each \$150 I get in Visas. He did this all day and all night. I paid him \$20 x 30 and he was very happy with his \$600 he had in his PayPal within a couple months. Meanwhile, he made me \$150 x 30 which adds up to \$6000. I took out his cut of \$600. That's \$5,400 made in just over two months. I bought Amazon cards, bought MacBooks, and sold them for an even bigger profit on my local Craigslist.

Be creative with this and I'm sure you can earn even more.

Happy earnings!
