

Cash Tree

Hey guys, so today I am going to show you how to make \$10 into \$100 in a day! Lets get right into the ebook.

First step we are going to look for an aged domain.

Factors that need to be considered when searching for your Domain:

The domain must be atleast 1 year old.

Must have at least 100 Backlinks or a PageRank

The reason you should have alot of backlinks or a pagerank as the more rank or backlinks it has the more \$ you will get for it.

I know a lot of ways to find old age domains, but this one I use everytime I am using this method.

I found this & I looked at it and it is very good & I would recommend you use this one.

[Click here](#)

This is a free domain checker and its a Gold Mine!

You can join for free or just check the site without registering. This means you don't have to go and confirm your email if you don't have the time/
don't want to.

The advantage of registering is that you will find thousands more expired domains to search for.

Once on the site click on deleted domains.
Then choose your Extension - Note that for my blueprint to work any extension will work!

Once you have clicked on your chosen extension,
left click on

BK - Backlinks or PR –
PageRank

You will then notice the domains with the most Backlinks or with the higher Pagerank will appear at the top. Make sure to take note of this as the more backlinks & pagerank the website has the more cash you make out of it.

On the right you will see when the domain expired and if its still free to register

Now , here's something people don't realize....

I have found a few domains that were marked as registered, but in fact they were available to purchase!

This happens when people don't use the domain anymore & it is basically like junk.

So when choosing your domain, make sure it has at least 1000 backlinks, or a Pagerank 1+ If you do this, you will get more \$!

If you are lucky you might even find a domain that has both of these! I have hardly come along these, so don't expect to many of them.

Now you have to check if the domain is available.

I register all my domains at Godaddy, its uree to join and easy to manage your account. Although if you don't want to use Godaddy & want to use NameCheap or something, you can use them to.

[Click here to sign up](#)

Paste or type in your desired domain, if its available click add to cart & buy it!

There you have your Domain, ready to go to the next stage!

Now we need to add this domain to your Hosting account.

I use Hostgator, very easy to work. Although I don't think it's the best, you can easily find ones on Google, but if you can't be bothered, just stick to Hostgator.

This service will cost you \$7.99 a month for the Baby Plan, and you can add unlimited domains! Also, PM me if you have a code & I am pretty sure I can get it for \$0.01 for the first month with no addons.

[Go here if you need a hosting account](#)

Now that you have added your domain, we will need to change the name servers on your domain. Nameservers will be given to you once you have signed up for hosting. Although on some hosts you can change them multiple times, so remember, if you want to change them multiple times, don't go with Hostgator.

All Hosting providers, send a Welcome email with all your details.

Log back into your Godaddy account, click on My Account....

Then Click on Domains

Once you see your chosen Domain click on Launch

Your Domain manager will open, scroll down to the bottom and click on set nameservers

You will then have 4 options, the one you want is: I have specific nameservers for my domains.

Click on the highlighted one and input your nameservers, save and then close!

That's it!

Contact CydiaL on HF if you need extra support, only if you have bought Ebook+ though.

So what have I done so far?

You have found a old domain.

registered it,

added hosting,

changed nameservers

and now you are ready to go to the next partg

TIP:

You will receive more \$\$ if your website is already designed & stuff and has a template. So make sure that if you have some skills in websites, use em!

TIP:

Also if you can't be bothered to make an website I would recommend going onto Ebay & buying an website from there for around \$3 & then just using the domain or copying the files over to your domain.

Also, explaining the explanation above. If you do buy a ready made website, make sure you have all rights, that means you can upload the files to any number of domains!

I am not going to teach you how to upload files, but if you want me to please pm me. CydiaL on Hackforums.

FINAL STEP

Lets sell your website!

Then we can start earning
the cash I promised you
about.

There are many places where you can sell
your website, but i only work with the best,
however if you want to get more bids/sales try
googling.

They are...

Ebay, Hackforums and Flippa

Hackforums is my favourite, a lot of members
here will want a website so they can put stuff
on there & get some traffic. I am not going to
explain how to post a thread in HF, I think
you can figure it out yourself, although if you
really need help, PM me: CydiaL

My second favourite will be
Flippa I found this website by
googling & yeah, I tried it &
have sold quite a few websites
there.

Lets start with my 2nd favourite choice, Flippa.

Flippa:

Go & register an account on Flippa.

[Go Here](#)

After you register, log into your account and click on Sell Website its on the right on the menu.

Input your Domain and start to create your auction

Fill out all the steps needed to create your auction.

IMPORTANT: Go & make a nice looking title so people will be attracted to it.

Ex: << YOURLINK.com >> 5000 BACKLINKS << 7
PAGE RANK >> EXTREMELY CHEAP <<
Make something that will attract peoples attention.

In the pitch ALWAYS give as much details and information as possible.

Tell them all the information
you can...

How many visitors,
pagelinks?

When was it created?
etc.

Contact me on HF: CydiaL if
you have bought Ebook++!
You will receive the extra
stuff.

BONUS HERE === You will receive another PDF file if you bought the Ebook++ with the bonuses.

BONUS HERE === You will receive another PDF file if you bought the Ebook++ with the bonuses.

As you move forward listing your auction, I've found it best to list it with a NO Reserve.

This means that the auction will start at the asking price and any bid could win.

List your auction for 5 days, this is more than enough to sell it for a reasonable price. You could do it for longer, if you want more money, if you need fast money, keep it 5 days or 4 days.

As you are starting out on Flippa, i do suggest you keep you BIN around \$100-\$150 then as you start getting higher reputation you will start raising your bin up.

All new websites are only \$9 to list and their
commission for success fees are 15%

So keep in mind what we are spending on each
auction:

Domain \$10

Listing \$9

Total of \$19 only

So in order for you to make profit, the site must sell for
over \$28, everything after that is your Profit!

Say you sell you site for \$100, you will make \$67
Profit - as Flippa will take their fee of 15%

Now say you create 7 of these babys a week.... !!! Now, if
you website dosent sell, you can re-list it for
half the fee, which they charge \$5

This is a betting system, some you win some you lose!

But never give up trying to earn the money you deserve!

Ebay:

Now Ebay is an easy way to sell lots of stuff online

Just the same way to list you auction on Flippa!

Start your listing at say...\$25, if it sell, great! If not..
just re-list it dosent cost you anything!

Lets finish up here.

Ok guys, so selling websites is hard to do, you
just gotta try!

If you take action you will succeed!

Made by CydiaL from HF. Contact me if any issues.
