Welcome to BITCOIN RAIN!
~~~~~~~~~~~~~~~~~~~

In this ebook, we will be discussing a way to make alot of Bitcoins. This does not have a 100%-guaranteed-success rate, but if you follow my instructions, you will most likely be making a lot of Bitcoins.

What we are doing is called *Bitcoin Gambling*. It's like normal gambling, but with Bitcoins. Pretty simple, right?

Well, not so much.

Many people lose all of their money (and more!) on these gambling sites, and we obviously don't want to do that.

But I'll get into that later, let's set this up!

~~~~~~~~~~~~~~~~~~~~~~

First, you need a Bitcoin wallet.

If you don't have one already, you can create one for free at
https://blockchain.info/wallet .

Second, create a Primedice account.

You can do that here.

Primedice is to be considered one of the top, if not the best Bitcoin-Gambling sites. *Why?* Because the House Edge (Percentage the site takes) is only 1%.

After you signed up for Primedice, be sure to <u>*set up your email and password.*</u> This is important to ensure your account is safe.

Let's get going.

You need to invest at least 0.01 Bitcoins for this to really profit you. (If you don't want to invest, see the end of this ebook for methods). Do that by clicking on the 'Deposit' button on Primedice.
You will get a custom Bitcoin-address. Send the amount you want to invest to that address. After about 10 minutes, the transaction will be confirmed and you can start <u>making it rain.</u>

3

What we are going to be doing is *Automated Betting.*
Click on the rocket you see on the left of the site.
Now it should look like this:

The settings you see here are crucial for success.
Simply copy my setting from the next image.:

Copy these settings.

ROLL UNDER TO WIN
41.25

PAYOUT	WIN CHANCE
2.400X	41.25%

BASE BET	0.00000000

☐ Limit number of rolls

On Loss
☐ Return to Base
☑ Increase bet by 100 %

On Win
☑ Return to Base
☐ Increase bet by 0 %

Now, you'll see that I left Base Bet empty.
That's because the amount you put in there is dependent on the amount you are betting.
If you, for example put in 0.6 BTC, I would go with 0.0005 BTC Base Bet.
If you put 0.01, I'd go with 0.000001.
Generally you can say, take your Bet and put 2-3 0s in front of the last number (that is not a 0).

5

Then you simply click on 'Roll Dice'
Now, listen carefully.

In order for this to succeed, **do not be greedy.**
Don't expect to turn 0.01 BTC into 1 BTC. If that is your expectation,
you will lose all your Bitcoins.

Generally speaking, what should be your goal is 20-30% profit.
After you reach your expected profit, stop the Automated Betting
by clicking on 'Stop Rolling'.

Why and how will this work?
This strategy is known as the Martingale strategy.
Every time you lose, you double your bet.
Now, it is highly likely that out of 10 times, at least 1/10 you will win.

This will work just fine, as long as you have enough money.
The more Bitcoins you have on your Primedice account, the more
losses on the Auto-Betting you can afford.

That's why the Base Bet is dependent on your bet-amount.

Warning: You may lose all of the money you are betting.

Do not bet with more than you're willing to lose.

After you are happy with your new balance, simply click on
'Withdraw' and enter your Bitcoin-address and the amount you wish
to withdraw.

Bonuses

Here is a strategy for making Bitcoins with only the faucet funds (no investment required).

Once you get your 0.00000200 BTC, use these auto-bet settings:
Multiplier: x4
Base Bet: 0.00000002
On Loss: 50% increase

Once you reach 0.00001000 BTC, use these:
Multiplier: x3.5
Base Bet: 0.00000003
On Loss: 75% increase

Have fun with the free Bitcoins, and get rich soon!
