So, what is a bitcoin?

Bitcoin is a payment system introduced as open-source software in 2009 by developer Satoshi Nakamoto. The payments in the system are recorded in a public ledger using its own unit of account, which is also called bitcoin. Payments work peer-to-peer without a central repository or single administrator, which has led the US Treasury to call bitcoin a decentralized virtual currency. Although its status as a currency is disputed, media reports often refer to bitcoin as a crypto currency or digital currency.

Bitcoins are created as a reward for payment processing work in which users offer their computing power to verify and record payments into the public ledger. Called mining, individuals or companies engage in this activity in exchange for transaction fees and newly created bitcoins. Besides mining, bitcoins can be obtained in exchange for fiat money, products, and services. Users can send and receive bitcoins electronically for an optional transaction fee using wallet software on a personal computer, mobile device, or a web application.

Why are they so popular?

Bitcoin as a form of payment for products and services has seen growth, and merchants have an incentive to accept the digital currency because fees are lower than the 2–3% typically imposed by credit card processors. The European Banking Authority has warned that bitcoin lacks consumer protections. Unlike credit cards, any fees are paid by the purchaser not the vendor. Bitcoins can be stolen and chargebacks are impossible. Commercial use of bitcoin is currently small compared to its use by speculators, which has fueled price volatility. Ultimately, an anonymous currency with nearly no fees.

No RISK!

So, as you probably know, people are earning by something called gambling. Not usually poker or blackjack, but minesweeper and dice.

NOTE: These sites are not in any way rigged, they use a unique system which is known as hashes, which basically shows you the solution before betting.

FREE BTC

Now, since you only have a low amount of BTC, I would recommend these settings for auto-roll

Base Bet: **0.00000001**

AUTOMATED ROLLING ⊗

ROLL OVER TO WIN	PAYOUT ✎	WIN CHANCE ✎
50.50	**x 2.0000**	**49.50%**

BASE BET

0.000000

NUMBER OF ROLLS TO AUTOMATE

1045454

ONLOSS
☐ Return To Base
☑ Increase bet by   100%

ON WIN
☑ Return To Base
☐ Increase bet by   0.0%

What to do next?

Primedice Gambling

All examples are going to be done with 1 BTC to keep it simple.

Method 1, Automated Rolling:

Remember, automated rolling is very dangerous. There is a bigger risk rather than doing this manually, YOU ARE NOT IN CONTROL.

Put your settings EXACTLY how they are in the image above. Using 1/1000th of your initial funds in the 'base bet' option. This is probably the most profitable autopilot, as you will be gaining 10% of your initial funds per 1k bets, on average of course.

Method 2, Automated Rolling:

(Lower Risk)   (Higher Risk)

When betting with this method, you use odds between 2.00x (safest) to 2.25x (more profitable)

This method is mainly for if you have a large amount of BTC (1+) although you could even do it with $10 worth of BTC and still make a very large profit, this is similar to matingale.

STARTING AMOUNT	AMOUNT TO BET
0.01	0.000005
0.02	0.000008
0.04	0.000025
0.08	0.00005
0.1	0.00005
0.2	0.00075
0.4	0.0001

I've seen a lot of people lose on this method, but I have never seen a loss streak over near 20, with the odds of 2.05x or even 2.10x, this only usually fails me when I get bored and dramatically increase the bet. **I wouldn't recommend going over 0.0001 for a stable increase.**

What this method does is assure that you will win a profit of what your odds had specified plus your original bet. For example, if you lose 10 times in a row, you'll get 50%-250% extra profit plus the original base bet.

Method 3, Manual Rolling:

You are swapping and changing and winning within your first few rolls.

For example, I work with 2x odds and begin with a base bet of 0.01 when I have a balance of 1BTC, the higher the base bet, the higher chances there are of you busting.

Bet 1:   Bet 2:

BET AMOUNT			PROFIT ON WIN
0.01500000	2x	MAX	0.00000000

ROLL OVER TO WIN	PAYOUT	WIN CHANCE
52.86	2.1000x	47.14%

ROLL DICE

BET AMOUNT			PROFIT ON WIN
0.03000000	2x	MAX	0.00000000

ROLL UNDER TO WIN	PAYOUT	WIN CHANCE
47.14	2.1000x	47.14%

ROLL DICE

So, on the first bet you do a high best, then ONLY IF YOU LOSE, you do a double your bet. You keep on doing this until you win. If you have a lower balance, you obviously start with lower amounts. I usually would recommend starting with 1% of your balance. The lower starting amount, the lower the risk, although, the lower the profit.

Method 4, Manual Rolling:

You do bets at 1.02x to 1.07x, for example, using 1BTC, there are 2 ways you could do this.

Option 1:

Start: Bet 0.50 at 1.05 odds twice or once at 1.10x odds (should win 90%+)

If Win: Bet 0.05 at 1.05x odds 10 times

If Lose: Start again

If Win: Bet 0.001 until you lose, once you lose, do either 0.50 or all in bet for 1.02x odds on the opposite end, so if you were going under 5, now go under 98.

Option 2:

Start: Bet 0.50 at 1.05 odds twice or once at 1.10x odds (should win 90%+)

If Win: Bet 0.05 at 1.05x odds 10 times

If Lose: Start again

If Win: Bet 0.005 until you lose, raise your bet to 0.10BTC, do this 5 times

If Win: Bet 0.02 until you lose, once you lose, raise your bet to 0.40, bet once

In this case, you should've just won 10% of your starting money from the larger bets.

Method 5, Low Risk:

This is another method which is similar to the martingale. This method works well, and best of all, this method does not need a high balance. But of course, it is recommended. I started with 0.2 BTC and made 900% of that, which is 1.8BTC so it's safe to say it works.

Method 1:

Start: Bet 0.00005 at 2.05x – 2.20x odds until you lose 3 times in a row

Once Done: Bet 0.01BTC at the same odds

If loss: Bet 0.02BTC at the same odds

If lose: Keep doubling your bet until you win, simple martingale adding 3 starting losses saving you 3 doubling losses, adding 60% safety to the betting pattern

Method 2:

Start: Bet 0.00005 at 2.05x – 2.20x odds until you lose 3 times in a row (roll OVER 50.5)

Once Done: Bet 0.01BTC at the same odds (Roll <50)

If loss: Bet 0.02BTC at the same odds (Roll >50)

If lose: Keep doubling your bet, changing back and forth from under and over. You will usually win doing this and you can usually start at like 0.05BTC. That's how confident and well working this method is.
